

Scatter plot showing time intervals (minutes) on the x-axis (0 to 60) and time of day on the y-axis (Sun 00:42 to Sun 09:38). The plot displays two types of data points: red dots for 'incorrect / changed' intervals and green dots for 'correct / changed' intervals. Vertical lines indicate rest periods at 36 minutes and 42 minutes. The data shows a significant increase in time intervals starting around 11:42, peaking near 12:00, and then decreasing towards 12:30. A dense cluster of green dots is visible between 11:42 and 12:00, indicating a sharp increase in time intervals during this period.
